Collection 2023

MEMBRANE

Gelanots® – membrane created by the Toyota Tsusho Corporation, one of the leading trading houses in Japan with leading technologies for waterproof, breathable fabrics for the sportswear, sportfashion and other high end apparel applications. Gelanots® quickly gained the confidence of the newest generation of fabric enthusiasts all over the world. This smart fabric is created in several versions, including the ones used by Milo Sport: ·3-layer Ultralight (80g/m2), where the outer ripstop layer is combined with a breathable and waterproof membrane: 3-layer Lightweight with mechanical Stretch (140g/m2). All versions of Gelanots®membranes have excellent waterproof performance up to 22.000mm/H2O and breathability up to 70.000g/ m2/24h. As a result of this, products efficiently transport water away from the body avoiding the process of condensation. Gelanots®laminates are not microporous so they retain their windproof, waterproof and breathable qualities independently from time of use.

Aquatex™ – these fabrics comprise a group of different materials covered with a layer of microporous polyurethane. This layer manages to achieve two opposing characteristics. Because particles of water are bigger than the micropores, Aquatex is waterproof and windproof. On the other hand, the molecules of vapour produced by a body during physical exertion are much smaller than the polyurethane micropores, so perspiration can permeate through the outer layer of material where it evaporates into the air. This effect is known as “breathability”, maintaining a natural microclimate near the skin and reducing the sensation of overheating and discomfort due to moisture remaining between outer clothes and body.

INSULATION

Primaloft® is currently one of the best alternatives to down. Milo Sport uses the most universal insulation weights: 100g/m2 and 60g/m2.

Primaloft® Sport – the perfect combination of high performance insulation and value. This technology combines ultra-fine and multi-diameter fibers for specific performance characteristics. The specially treated ultra-fine fibers help to form a water resistant insulating structure, while the multi-diameter fibers help to build loft.

Polartec®Thermal Pro®Recycled – a group of knitted fabrics made of polyester fibers with excellent isothermal properties. The Thermal Pro® range offers unique insulation properties while moving the moisture away from the body. Very soft and breathable, they are rugged, do not change their outer appearance and are resistant to pilling. In recent years we have been using the environmentally friendly version of this fabric to give a little help to mother nature.

Polartec® Thermal Pro® FR is a fabric platform that embodies the versatile style applications of synthetic fleece.

A diverse variety of knitting techniques create unique surface structures without sacrificing thermoregulation performance. The adapted look and feel still delivers the warmth and comfort of classic fleece.

Polartec®100 Micro – these fabrics are the standard for lightweight warmth and breathability. Tight knit construction features 100% polyester microfibres and dries quickly. These durable, non-pilling fabrics maintain their insulation ability after repeated cleaning. 100 Micro fabrics keep you warm and comfortable in a wide range of conditions.

Polartec®Delta™ – was created so cooling fabric technologies could better utilize the body's natural cooling process: sweat. Next-to-skin fabrics that target wicking and fast drying will keep moisture moving, but don't work towards actually cooling the body down. Delta™ works more efficiently by elevating touch-points for increased airflow, faster moisture dispersal, and reduced wet-cling.

Polartec® Power Dry® is the most advanced next-to-skin moisture management fabric. By using proprietary bi-component knit construction, every fiber works with maximum efficiency. Moisture is quickly pulled away from the body and transferred to the outer surface for faster evaporation during activity.

Softshell 2 – 2-layer fabric constructed of 4-way stretch outer layer bonded to a fleece inner layer. It offers maximum freedom of movement combined with warmth, softness and wind protection.

Nanoqpile – group of fabrics which are chosen and developed after targeted testing to get the best possible characteristics and performance, suitable for a broad spectrum of insulation applications. They can be thermoactive and stretch when used for manufacturing performance garments (Nanoqpile Stretch), warm, skin friendly and appealing for manufacturing everyday jackets (Nanoqpile 2) or comfortable and technical for light weight fleece jackets (Nanoqpile 1).

TECHINCAL

Extendo – 4-way stretch fabric with a robust outer- and moisture regulating inner surface. Made from polyamide and elastane fibers (92% / 8%). Extendo dries rapidly, is highly elastic, retains its shape and is light and breathable. These make it first choice for all active travellers, trekkers and climbers.

Extendo LT – a lighter, and at the same time thinner version of Extendo material used for the production of hiking pants for use during spring and summer seasons. It provides greater thermal comfort at high temperatures while retaining other features of Extendo textiles, the flexibility and strength.

Extendo WN – heavier and thicker version of Extendo. Increased density and warmer inner finishing make the fabric especially suitable for lower temperature use providing better wind and thermal protection. Used for production of garments for intense usage like ski touring, climbing etc.

Supplex® – a fabric manufactured by Invista that combines the softness and grip of cotton with all the best properties of polyamide. It is resistant to tearing and abrasion as well as breathable. Thanks to thin polyamide fibres used for manufacturing, it is up to 30 % softer than standard polyamide fabrics.

Cotton Stretch – a 4-way stretch cotton fabric with and addition of 5% elastane yarn. Thanks to its great comfort, the fabric is a very good choice for manufacturing appealing climbing and bouldering garments.

Eclipse – group of lightweight, pilling resistant, technical knit fabrics with good moisture management, which wick moisture away from the body to the next layer of the clothing. Eclipse has a soft feel, dries rapidly and is very breathable. Available in different mixtures of polyester, elastane (Eclipse Stretch) and cotton (Eclipse Cotton).

Midora – fabric made of a mixture of polyester and polyamide fibres with 600D and 1000D thicknesses. Midora is highly durable and abrasion-resistant, making it excellent for backpacks, travelling and trekking accessories. It comes with a water resistant polyurethane coating.

Milo Sport reserves the right to modify any of the products presented in the catalogue, if it considers it appropriate. Note: Because of the limitations of the printing process, the colours of the products shown in this catalogue do not always match the real shades of fabrics used. Should any doubts arise, please consult the company. All products presented in the catalogue have the benefit of our two-year warranty for workmanship and fabrics. Warranty claims can only be considered upon submission of the warranty card attached to each product. Care should be taken while maintaining our products and the special, written instructions for use provided with each product should be followed. Warranty conditions: The warranty card allows the purchaser to exercise their rights, under the warranty. Milo Sport products identified with our warranty label have a 24 month warranty for all design and fabric defects and for workmanship, which shall be to the standards set by the company. Repairs undertaken under warranty do not extend the warranty period. The warranty does not cover mechanical damages caused by the use, or wear of elements and damages resultant from non-conformity to the instructions for use. Your statutory rights are unaffected.

THE MILO STORY

The story begins in a small flat behind the iron curtain where two climbers, the current owners of Milo, started to sew their first pants and jackets on two simple sewing machines. They were amongst the first Polish pioneers of outdoor clothing. In the early 90's they decided to develop their ideas and establish their own brand, and Milo was born. In 1993 this small company started its big climb. Right from the start the products were originally designed and produced to the highest standards, and after just a few years Milo gained recognition as a brand producing smart, good quality garments for conscious climbers and mountaineers.

KUGTI

SIZES S | M | L | XL | XXL

COLORS

- red race/blue sky/titanium grey
- blue sky/mirabelle/red race
- titanium grey/blue sky

FABRIC 100% Polyamide
FILLING duck down 90/10 (600 cuin)

Thick and warm down jacket for winter outdoor use. The cut is movement friendly so the jacket will not twist and rise during any kind of activities. The wide-open zipped front pockets are placed high enough to be accessible when carrying a backpack with a closed hip belt. There is also an additional, easily accessible pocket on the chest for a smartphone or a wallet. On the inner side there are two open pockets to carry winter gloves or goggles and a practical zipped pocket to turn the jacket into a down pillow. The padded hood is adjustable in two dimensions to be as close to the head as possible. The bottom of both sleeves are equipped with stretch cuffs with thumb holes. The ladies' version has the same features tailored to fit women.

FABRIC Gelanots® 2.5 L
WATERPROOF 25 000 mm/H2O
BREATHABILITY 60 000 g/m2/24h

Simple, ultra light waterproof and wind resistant jacket made of stretchable 2,5-layer Gelanots fabric. The parameters of the fabric are as high as 25000mm/H2O for water protection and 60000g/m2/24h for breathability. These levels combined with light weight, great packability and move friendly cut make the Zacate a fantastic choice for all outdoor enthusiasts looking for a high performance water protection during their adventures. The jacket is equipped with two spacious and wide opening front pockets, two-way opening main zip with an additional snap button at the bottom for a better harness access, one additional arm pocket for a smartphone and an inner mesh pocket. The hood is adjustable in two dimensions, the cuffs are profiled and also adjustable.

FABRIC Gelanots® 2.5 L
WATERPROOF 25 000 mm/H2O
BREATHABILITY 60 000 g/m2/24h

Extremely light waterproof trousers made of 2,5-layer Gelanots material with the parameters of 25000/60000, taking up very little space in the luggage. Designed primarily for use in conditions of sudden deterioration of weather, as a water- and windproof protection worn over a pair of trekking trousers. Equipped with wide-opening zippers at the bottom of the legs, which make putting them on without taking off shoes much easier. Intentionally there are no pockets, yet the waterrepellent zippers allow wide access to the pockets of the trousers worn underneath. The cut is a bit more loose, minimizing possible movement restrictions.

FABRIC Gelanots® 3 L
WATERPROOF 20 000 mm/H2O
BREATHABILITY 34 000 g/m2/24h

Technical mountaineering jackets manufactured from robust, yet slightly elastic fabric bonded in Gelanots® 3-layer membrane providing high waterproofness (20000mm/H2O) and air permeability (34000g/m2/24h) levels. As all Milo technical garments their cut is move-friendly and keeps the jacket in the right place, pockets are placed to ensure easy access even when wearing a backpack with closed hip belt and fully adjustable hood fits a mountaineering helmet. 2-way underarm ventilation provides additional thermal comfort during intensive activities. Equipped with 4 pockets, 1 of them accessible from the inside. Robust, technical salopettes for all mountains. Equipped with full length side zips for optimal comfort when putting them on or taking them off. The lower leg circumference is fully adjustable with zips to make them compatible with most mountain and trekking boots. The waist is also adjustable and they come with removable suspenders. The main pockets have additional integrated zips inside to access layers worn below.

FABRIC Aquatex™ 2,5 L
WATERPROOF 10 000 mm/H2O
BREATHABILITY 10 000 g/m2/24h

Thin, ultralight and compact jacket and pants with all technical details necessary for climbing, ski touring or even cycling made of 2,5 layer AQUATEX is the choice for all the who want to stay dry. The jacket is equipped with an adjustable hood, two big pockets, a small arm pocket, ventilation, adjustable cuffs and hem. The pants have zips down the sides, adjustable ankle hems, contoured knees and zips to allow access to pockets in the lower layer. There is a drawstring at the waist of the pants.

UTTAR

SIZES XS | S | M | L | XL | XXL

COLORS

- blue lagoon/black
- grey/black

FABRIC Extendo WN

Pants made of the warmest version of Extendo fabric, finished with a water repellent DWR layer, designed for autumn and winter mountain trips. They have a slightly raised back waist, adjustable bottom hem and side zippers to facilitate wearing them over all trekking boots. Profiled knees ensure high comfort, and the sewn-in reinforcements protect the sensitive areas against damage. The pants are equipped with 5 zipped pockets. Available for men and women.

DANAI

SIZES S | M | L | XL | XXL

COLORS

- black/grey zips

FABRIC Extendo WN

Light, breathable ski touring jacket made of the winter version of Extendo fabric. The fabric proved to be comfortable, elastic, thick enough to provide wind protection and drizzle resistant thanks to DWR finishing. The jacket is equipped with a waterproof hood hidden in the collar, 2 main pockets with wide opening zips, 1 additional chest pocket and ripstop reinforcements in the most important places when wearing a touring pack: on the shoulders and around the hips.

LAHORE PANTS

SIZES S | M | L | XL | XXL

FABRIC 100% Polyamid

Climbing pants that are second to none when it comes to low weight combined with high durability. They have a regular cut and thanks to the gusset in the crotch and profiled knees, they do not restrict movements. The circumference of the bottom of the legs can be pulled down so that it does not get in the way when climbing and the waist circumference is adjustable with a webbing, so you do not need to use an additional belt. The pants have 3 spacious pockets, a loop for attaching a chalk bag and a narrow pocket for a brush.

TIMMIT 45 - advanced, technical backpack for all mountain use with ergonomic, adjustable carrying system and a lot of useful features. Apart from the big main compartment, necessary items can be stashed in the spacious lid pocket or two zipped side pockets accessible even if the mesh pockets are full. On the front there are two open pockets, One of them has elastic mesh that can be used for carrying items which need to be easily accessible, such as a jacket or map. The other is designed to hold a snow shovel or ice axe when the handle is attached to the gear loops. Two of the side compression straps are longer so a sleeping mat can be attached to the side of the backpack. An integrated raincover can be found in the bottom.
